WinISO Standard 6.1.0.4387 Serial Key.Q: Memorise an algorithm I want to memorise a set of algorithms for a purpose such that I don't have to look up how to do them. A typical example would be a vector for a distance from origin. I have been wondering how this can be accomplished. Is there a good way? A: Mathematics is a set of rules you learn to follow. They have very obvious and useful properties. You learn them by memorization - learning to understand and carry out them consciously on an ongoing basis. No shortcuts, no magic. There are plenty of books about this, in which the main method is to Describe an algorithm Give an example Describe its properties For example, in my undergrad textbook, we started with the book "An Introduction to Discrete Mathematics". This book describes how to find shortest paths (think of this as finding a vector close to the origin) by using Breadth-First Search. You begin at some vertex and then follow edges and store the path to the vertex you arrive at in a data structure. When you arrive at a vertex that you have not seen before, you explore its neighbourhood. You stop exploring at one
